**PEDIATRIC GLIDER
MODEL 100-P**

BRODA[®]
Comfort is Essential

GENTLE GLIDING

Kids love the gentle gliding action of the Aspire Pediatric Glider. Therapists appreciate the positive outcomes that it helps provide.

Whether in the classroom or multi-sensory room, gliding can provide stimulation that is desired, and may also be utilized when the child needs a break.

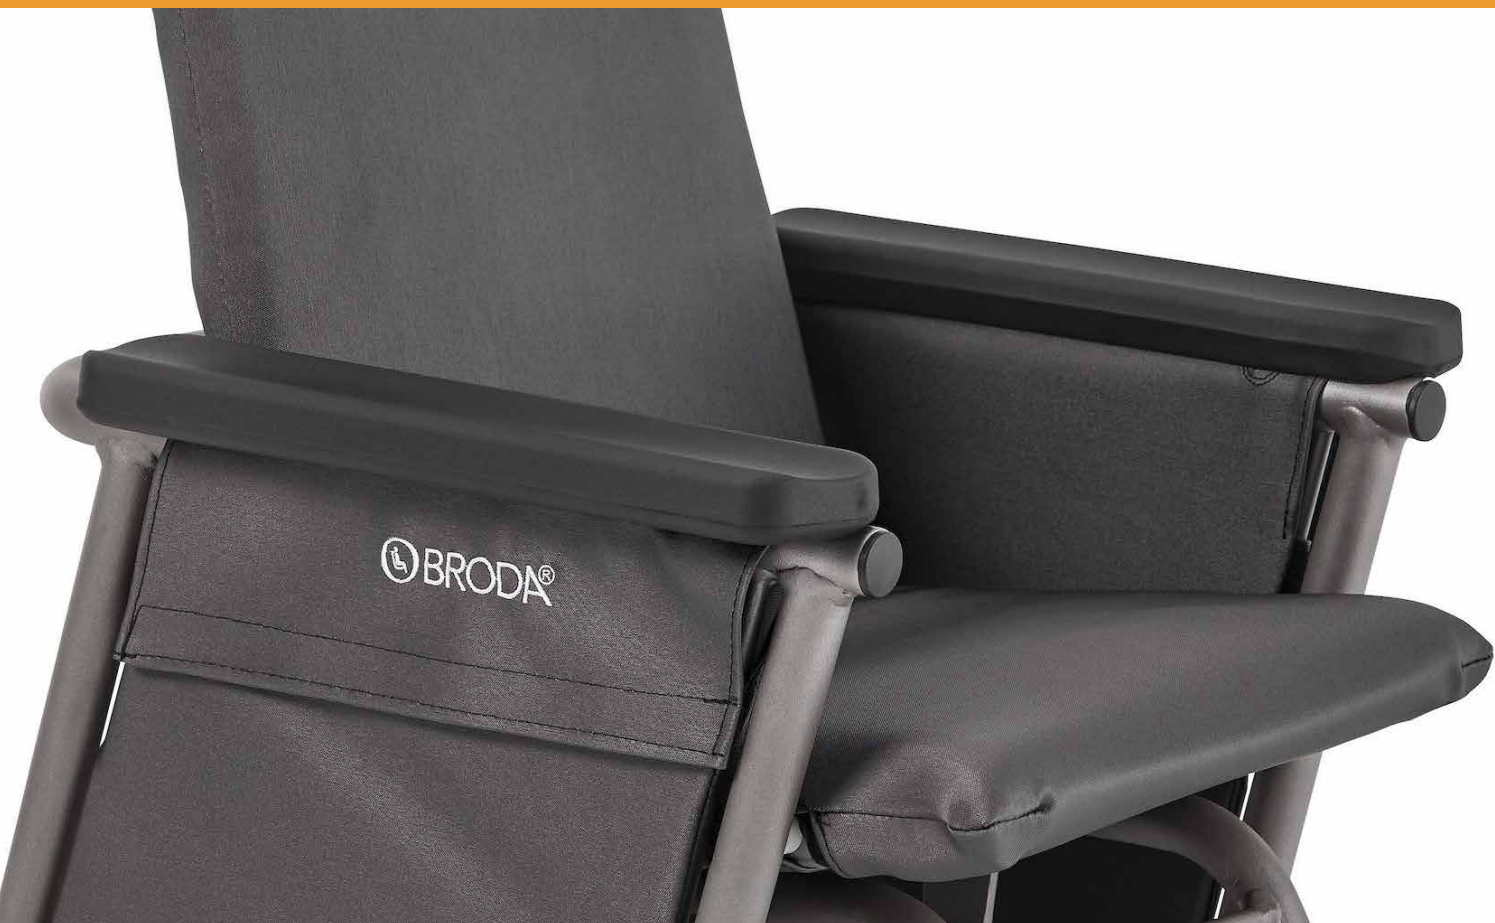

Calming Seating:

For many children, focusing on tasks can be challenging or overwhelming. The soothing, repetitive motion of gliding helps to calm by allowing for gently controlled movement. This allows children to feel more in control of their environment, aiding in self-regulation, relaxation, and focus.

Active Seating:

Gliding can be an integral part of a child's sensory diet. For kids who crave the stimulation from movement and activity, gliding can help provide purposeful movement to help improve focus and well-being.

COMFORT

The Aspire Pediatric Glider provides the ultimate in comfort. BRODA's Comfort Tension Seating® contours to the body for an individualized fit. Soft foam padding and supportive design gently cradle for a comforting effect.

The gliding action also provides comfort. An alternative to rocking, gliding keeps the user on an even plane, helping to create a more calming effect.

For additional fit and “hug”, optional inserts with seat depth and seat width reduction are available.

Comfort Tension Seating®

PARTICIPATION IN LEARNING

Help children be a part of the activities and learning by providing the most comfortable seat in the house!

The Aspire Pediatric Glider provides comfort and vestibular stimulation that kids often seek. They are able to better engage, increasing their sense of well-being and self-esteem.

Ideal for circle time, reading, and interaction with games and toys.

The versatile Aspire Pediatric Glider fits well into many environments, taking up very little space.

Rear transport wheels allow the glider to be easily moved around the room, school or home.

For more information regarding the Aspire Pediatric Glider, visit our website

SAFETY & DURABILITY

The Aspire Pediatric Glider provides unsurpassed safety and durability. Unlike traditional rocking chairs, the glider offers a stable base that remains stationary while gliding, helping to reduce the risk of tipping.

The rear caregiver lock provides safety by enabling the gliding action to be disengaged when needed.

BRODA's proven durability and solid construction ensures product longevity.

Provides peace of mind for safe play and daily use
