### Frame Dimensions

Specify Frame Width & Frame Depth Settings

**Note:** P.R.D. CG has 4” of depth adjustment for growth. Depth is measured from front of back post to front edge of the seat frame. For back post location add seating/hardware thickness (typically 2”) to client’s actual seat depth.

Example: seat depth of 12” + back/hardware thickness of 2” = back post location set at 14”

**Note:** The P.R.D. CG has 6” of center of gravity (CG) adjustment on all adult frames. The default CG setting is 1 position forward of either the client’s actual seat depth or the manufacturer’s seat depth setting.

- Specify Client’s Actual Seat Depth: _____

*Note: Use chart to determine seat to floor height. Seat to floor height determined by frame type, rear wheels, and front caster size.*

*Note: Caster sizes vary slightly in height by type.*

*Note: Seat to floor heights are approximate, and are impacted by wheel type, caster size and braking choice. Heights can vary +/-.1/4".*

*Note: Seat pan choice increases seat rail to floor height 3/8" to 3/4".*
