Squiggles

Why Stand?

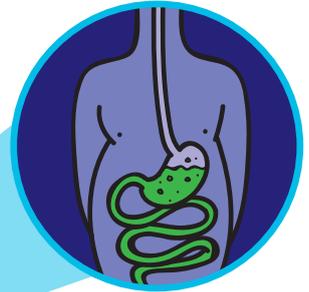

Enables kids to interact eye-to-eye with peers

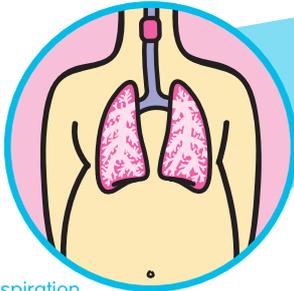

Improves wellbeing, alertness and sleep patterns

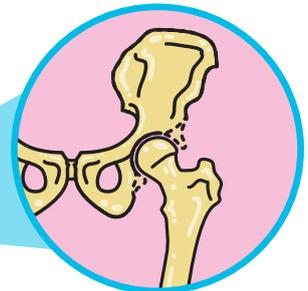

Enhances circulation and blood pressure

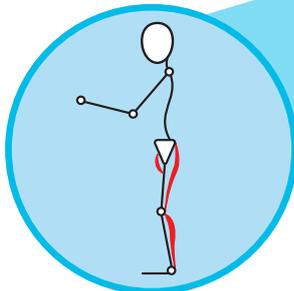

Aids digestion, bowel function and bladder drainage

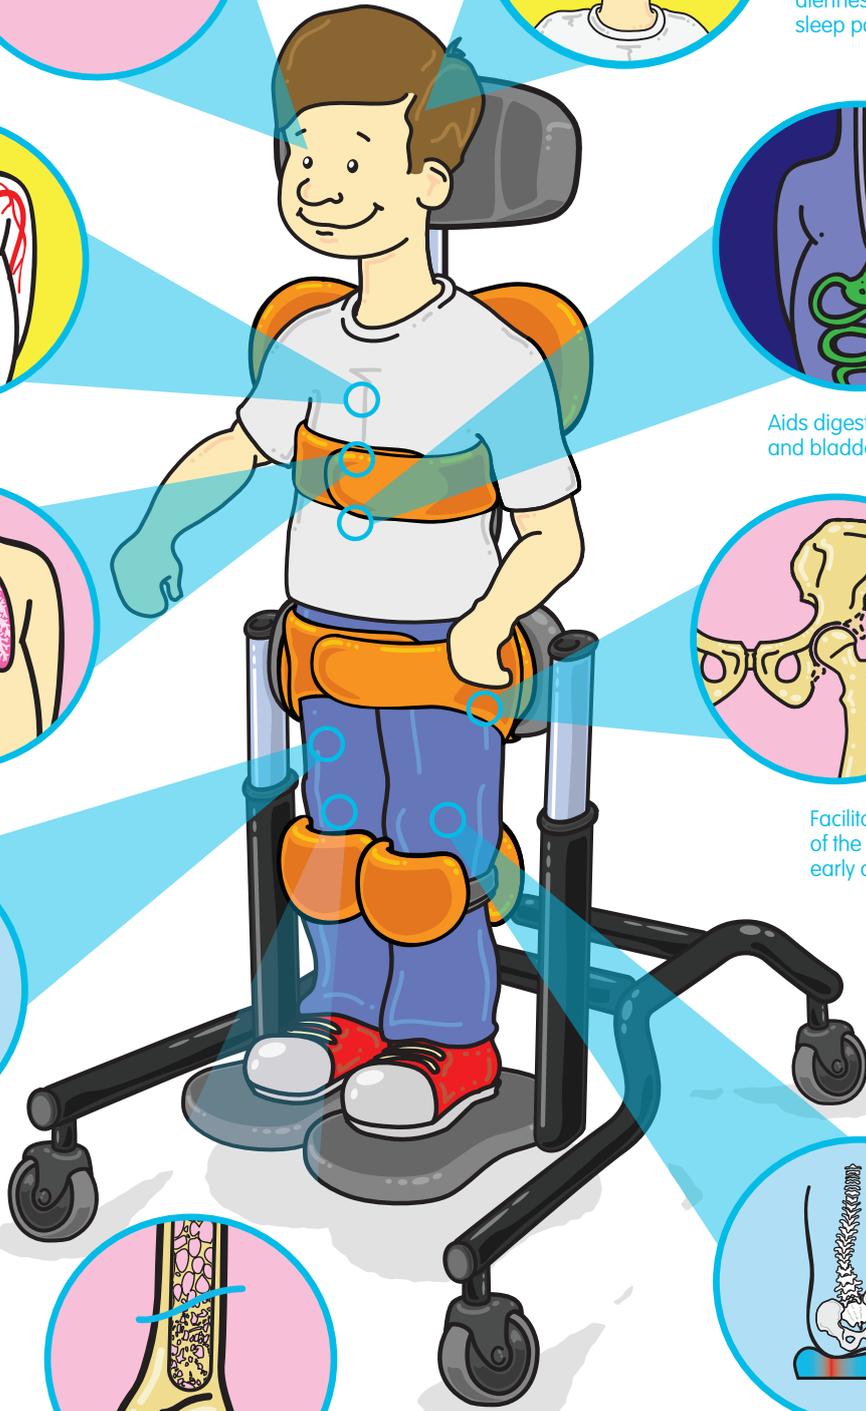

Improves respiration and voice control

Facilitates formation of the hip joint in early development

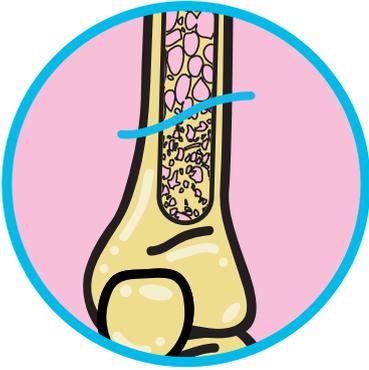

Stretches muscles, preventing the onset of contractures

Increases bone density and reduces risk of fractures

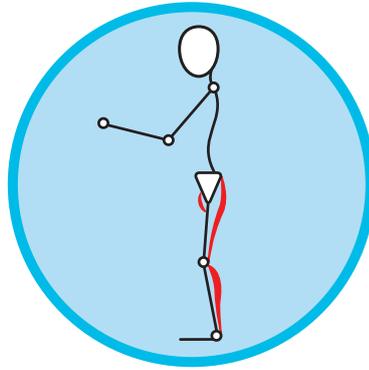

Improves skin integrity by relieving pressure encountered during sitting

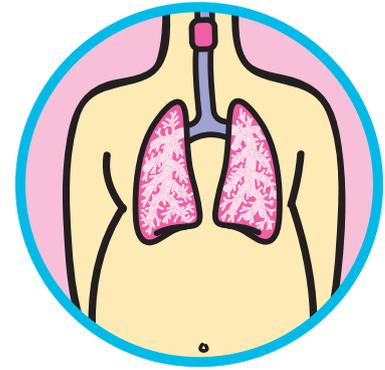

Standing increases bone density and reduces the risk of fractures.

Normal bone development needs a combination of good nutrition, weight bearing, e.g. through standing or walking, and the use of muscles. Research shows that standing improves the bone density of the pelvis and leg bones of non-ambulatory children, such as those with CP, Muscular Dystrophy, Spina Bifida or spinal cord injury.

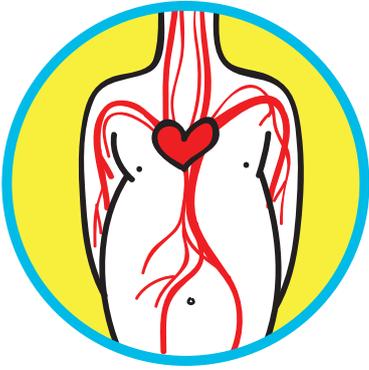

Standing stretches muscles, preventing the onset of contractures.

Research shows that standing programmes, if maintained, improve the extensibility of the hamstrings, increase range of movement and reduce the extent of spasticity. Standing also provides proprioceptive input to young developing muscles and joints, builds endurance to standing and regulates resting muscle tone.

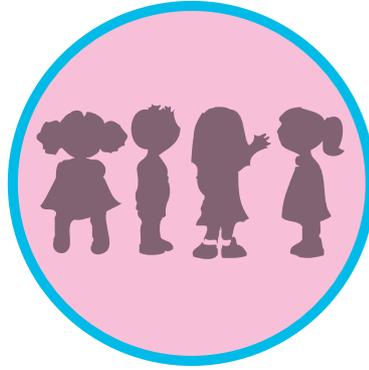

Standing improves respiration and voice control.

When we stand, the diaphragm has more room to expand and contract, meaning that we can breathe in and out more easily, deeply and efficiently. Therefore, standing allows individuals to speak with improved volume and voice control.

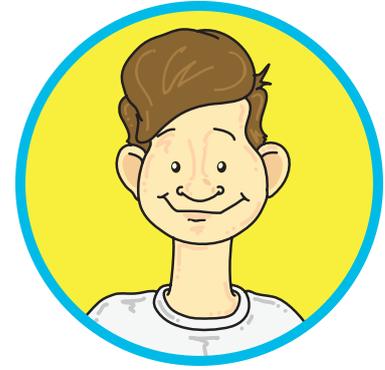

Standing enhances circulation and blood pressure.

Effective circulation is closely related to breathing. Standing results in improvements in blood pressure, heart rate and circulation, and a reduction in orthostatic hypotension and oedema in the legs and feet.

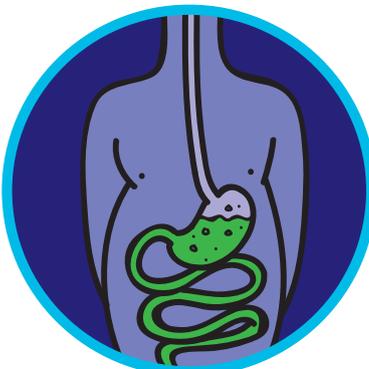

Standing enables kids to interact eye-to-eye with their peers.

Eye-to-eye interaction improves confidence, self-esteem and self-image as the child can accomplish tasks in the same manner as other students or siblings. Supported standing eliminates the fear of falling and so allows the individual to direct their attention towards learning and social interaction.

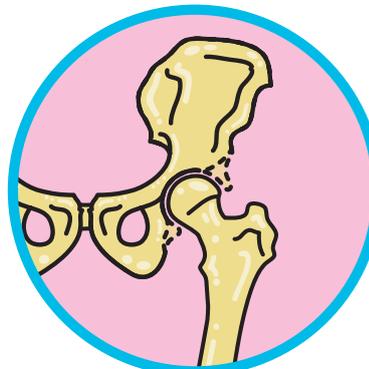

Standing improves wellbeing, alertness and sleep patterns.

Studies have reported improved sleep, decreased fatigue, increased alertness and feelings of wellbeing from regular standing. While standing, the effects of retained primitive reflexes such as symmetrical tonic neck reflex (STNR) and tonic labyrinthine reflex (TLR) are more controlled and therefore, sensory organisation, comfort, energy and attention are maximised.

Standing aids digestion, bowel function and bladder drainage.

Standing is believed to help with digestion and toileting through a combination of gravity and the activation of the stomach muscles. Studies have backed this up showing improved bowel regularity and clearance and better bladder awareness and emptying.

Standing facilitates the formation of the hip joint in early development.

Children who stand at the normal developmental age of 12-16 months are considered more likely to develop the ball and socket of the hip joint, which can prevent hip subluxation or dislocation. Standing from an early age also helps a child with standing transfers in the future.

Standing improves skin integrity by relieving pressure encountered during sitting.

As standing improves respiration, it allows more oxygenated blood to reach tissues which are subject to pressure when seated, resulting in fewer bedsores and improved skin integrity.

The Squiggles Stander is an extremely versatile three-in-one stander, offering prone, upright and supine standing in one product.

The product has a large growth range for kids aged **1 - 5 years** and is available with a range of indoor and outdoor mobile bases.

The wide range of **adjustability** offered by the chest, hip, and knee supports and the head support in Supine provides clinicians with the tools to position a large range of children in the same product.

Colourful, tactile and **fun design** is ideal for young kids, with attractive age appropriate, machine washable covers, available in **four colours**.

Lightweight and robust stander support frame can be easily transferred from one chassis to another or disassembled for storage or transportation.

4. Removable headrest compatible with a number of head supports

2. Adjustable chest positioning support

3. Cushioned sternum pad

1. Adjustable pelvic positioning support

6. Adjustable knee supports

8. Pivot chassis

5. Adjustable foot plate

Chasis Options

The combination of the standing support and chasis options including our outdoor mobile chasis means that kids can benefit from standing therapy in any environment.

The **Squiggles Pivot** chasis offers a wide range of tilt incline options adjusting from vertical to almost horizontal.

This enables your child to be placed in the system at their preferred angle. It has 4 lockable swivel castors which make it very manoeuvrable around the classroom or home. This lightweight chasis can fold away in seconds for storage or transportation.

The **Squiggles Easel** chasis is a compact static chasis which offers angle adjustment from vertical to 70°. The Easel chasis is a static base which is extremely compact and folds away easily for storage.

Pivot Chasis

Easel Chasis

The Squiggles Standing system.

The standard product includes:
Hip and chest support with sternum prompt; chest and hip lateral supports; kneecups; footplate and tray attachment.

Squiggles standing system dimensions

Age (approx)	1 - 5	
Max user weight	22kg / 48.4lbs	
User height	Min 750mm / 29.5 inches	Max 1110mm / 43.5 inches
Chest support	Angle adjustment +/- 30°	Depth adjustment 50mm / 2 inches
Chest support height (footplate to armpit)	Min 550mm / 21.5 inches	Max 820mm / 32 inches
Chest width (distance between laterals)	Min 160mm / 6.3 inches	Max 230mm / 9 inches
Hip support (height from footplate to mid buttocks)	Min 300mm / 11.8 inches	Max 530mm / 20.8 inches
Hip width (distance between hip guides)	Min 160mm / 6.3 inches	Max 230mm / 9 inches
Distance between midline of knees	Min 140mm / 5.5 inches	Max 215mm / 8.4 inches
Footplate angle	Plantarflexion 10°	Dorsiflexion 10°

Tray size

Tray height - Prone (footplate to top of tray)	Min 555mm / 21.9 inches	Max 825mm / 32.5 inches
Tray height - Supine (footplate to top of tray)	Min 480mm / 18.5 inches	Max 825mm / 32.5 inches
Tray angle adjustment	Prone 30°	Supine 40°

Stander support frame	Weight 7kg / 15.4lbs Width 390mm / 15.4 inches	Length 680mm / 26.8 inches Height 390mm / 15.4 inches
Pivot chassis footprint (unfolded)	Weight 5.5kg / 12.1lbs Width 550mm / 21.7 inches	Length 820mm / 32.3 inches Height 515mm / 20.3 inches
Pivot chassis footprint (folded)	Weight 5.5kg / 12.1lbs Width 550mm / 21.7 inches	Length 700mm / 27.6 inches Height 300mm / 11.8 inches
Easel chassis footprint (folded)	Weight 1.5kg / 3.3lbs Width 540mm / 21.3 inches	Length 690mm / 27.2 inches Height 60mm / 2.4 inches
Pivot chassis angle range	90 - 160°	90 - 70°
Mobile chassis weights	Without suspension and wheels 6.1kg With suspension and wheels 13.4kg With fixed wheel kit and wheels 13.4kg	With suspension, without wheels 8.4kg With fixed wheel kit, without wheels 8.4kg
Mobile chassis footprint	With wheels 740mm x 740mm	Without wheels 490 x 760mm

Chassis Options

Pivot Chassis
Gas operated.
Can be adjusted
with child in
frame.

Easel Chassis
Manually
adjusted.
Position cannot
be altered with
child in frame.

Mobility Chassis
(Indoor) Without
suspension kit.
For indoor use
only. Manually
adjusted.

LECKEY^o

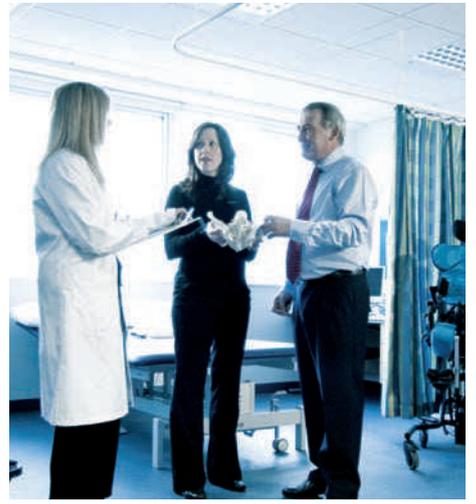

Established in 1983, Leckey is a globally recognised pioneer in the research and development of products that help adults and children with disabilities to go, do, enjoy and participate in everyday activities throughout the day and night.

We take a highly clinical approach to product design and development. Through in-depth clinical research studies with leading universities, and extensive trials with occupational therapists, physiotherapists, users and their families, we continue to develop posturally supportive, family friendly products for all day care, at every stage of life.

Through early intervention, childhood and adulthood Leckey's experienced team of designers, therapists and bioengineers work together to develop products that meet the clinical needs of the healthcare professionals and the social needs of the user.

To achieve this, we work with the healthcare professionals, the individuals and carers who use our products everyday. With their help, we create the dependable, durable, proven and high performance products that we are known for worldwide.

sleepfirm

24 hour postural
care for babies,
kids & adults.
Sleeping, Sitting,
Standing, Walking,
Moving, Bathing,
Toileting.
