key features

Tilt in space

If your child needs to be hoisted, the Samba can be tilted back, this is to enable a safe and controlled transfer, even if your child extends. The tilt in space is easy to operate by using the safety catch and the lever.

Understanding posture

The Samba has an unique approach to managing posture. It does this effectively by using the contours of the seat and backrest, as opposed to hard intervention. The contouring can be tailored to the needs of your child by adding or taking away the foam inserts. The contours in the backrest have a subtle, but effective way of holding your child in a good mid-line position, without the intervention of using fixed laterals.

The powered Samba chair comes with 5-piece foam roll kit, 4-point pelvic strap, tray, ferndale style sandals, footrest and a powered hi-low chassis.

Size 1 is also available in a manual option. The manual Samba chair comes with 5-piece foam roll kit, 4-point pelvic strap, tray, ferndale style sandals, footrest and a manual height adjustable base.
